

Modern Machinery Resists Even War's Destruction

A German transport column removing the remains of a Russian aeroplane which was brought down by anti-aircraft guns near Lotzen. Although the aeroplane itself was irreparably damaged, the engine was again set up, this time on a German machine

Proof of the excellent quality of the material used in American automobiles was shown when a shell struck the front of an American motor car. Despite the enormous strain which axle and frame underwent, both being bent almost beyond recognition, there was not a crack in the metal

A Russian machine-gun, captured by the Germans during the summer drive, now serves as an anti-aircraft gun to keep Allied aeroplanes away from the town of Tirlancourt, France, which is now occupied by the invading troops. This type of gun is highly prized by both sides
