

New Cures at the Royal Baths in England

Above: The Diathermy treatment for frostbite. During the past two winters many English soldiers would have lost their feet by amputation except for the timely application of this new treatment which consists in applying electrically heated pads to the feet

At left: The new substitute for mud baths. It is a peat massage bath and is the invention of the general manager of the Royal Baths at Harrogate. It is believed to be a potent treatment for rheumatism, sciatica, lumbago, neuritis, etc.
